Project Title: “Skill Progress Analytics with Personalized Learning Path Recommendation Engine”

Project Description: (here you write what you did in this project (contribution) including Model Description

The Recommendation & Dashboard module provides personalized learning recommendations based on the student’s progress and skill analysis results.

It processes the student’s performance data, skill levels, strengths, weaknesses, and learning progress to generate suitable learning recommendations.

The recommendation engine suggests a personalized learning path based on the student’s individual performance and areas that need improvement.

The dashboard displays the learner’s progress, recommended courses, topics, skill development, and improvement areas in an easy-to-understand format.

The generated reports provide a clear summary of the student’s learning progress and skill development.

1. **Personalized Learning Path Generation:** Generates a customized learning path based on the student’s performance, skill level, and learning needs.
2. **Course and Topic Recommendation:** Recommends suitable courses and topics according to the student’s interests, performance, and skill gaps.
3. **Weak Area Improvement Suggestions:** Identifies weak areas and provides suitable suggestions and learning resources for improvement.
