Q2 Hospital Registration – NullPointerException Debugging

10 marks

A hospital patient registration application crashes when patient information is unavailable.

Debug the following complete Java program.

Task:

1. Identify the runtime error.
2. Modify the program to handle a missing patient name.
3. Handle invalid age input.
4. Use try-catch-finally appropriately.
5. The program must always display "Registration completed".
6. Submit the COMPLETE corrected Java program.

Faulty Program:

```
import java.util.Scanner;

class PatientRegistration {

    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);
```

10 marks

5/5 answered

```
System.out.print("Enter patient name: ");
String inputName = sc.nextLine();

String name;

if (inputName.equals("NULL")) {
    name = null;
} else {
    name = inputName;
}

System.out.print("Enter age: ");
int age = sc.nextInt();

System.out.println("Patient Name: "
    + name.toUpperCase());

if (age >= 18) {
    System.out.println("Adult patient");
} else {
    System.out.println("Minor patient");
}

System.out.println("Registration completed");
}
```

The corrected program must prevent NullPointerException and handle invalid age input without terminating unexpectedly.

 **Debugging Task:** Find and fix the bugs in the code shown above. Write your corrected code in the editor below.

Your Fixed Code

```
1 import java.util.*;
2 public class Main{
3     public static void main(String args[]){
4         Scanner sc=new Scanner(System.in);
5         try{
6             String in=sc.nextLine();
7             String n;
8             if(in.equals("NULL")){
9                 n=null;
10            }
11            else{
12                n=in;
13            }
14            int a=sc.nextInt();
15            if(n==null)
16                System.out.println("Patient name is unavailable");
17            else
18                System.out.println("Patient Name:"+ n.toUpperCase());
19            if(a>=18)
20                System.out.println("Adult Patient");
21            else
22                System.out.println("Minor Patient");
23        }
24        catch(InputMismatchException e){
25            System.out.println("Invalid age input");
26        }
27        catch(Exception e){
28            System.out.println("register failed");
29        }
30        finally{
31            System.out.println("registration completed");
```

```
32         }  
33  
34     }  
35 }
```

Test Input

Arun
25

Output

```
Patient Name:ARUN  
Adult Patient  
registration completed
```
