Logger

LOGGER

You are working on a project that requires the use of a logging framework. Write a Java program to create an interface called "Logger" with methods for logging different types of messages, such as "debug", "info", "warning", and "error". Implement the interface in a class called "Log4jLogger" that uses the Log4j logging framework.

PROGRAM EDITOR

Java

Run

Save

```
1 import java.text.SimpleDateFormat;
2 import java.util.Date;
3
4 interface Logger {
5     void debug(String message);
6     void info(String message);
7     void warning(String message);
8     void error(String message);
9 }
10
11 public class Log4jLogger implements Logger {
12
13     private String className;
14     private SimpleDateFormat dateFormat;
15
16     public Log4jLogger(String className) {
17         this.className = className;
18         this.dateFormat = new SimpleDateFormat("yyyy-MM-dd HH:mm:ss");
19     }
20
21
```

OUTPUT

```
2026-08-12 20:48:02 DEBUG [Main] - This is a debug message
2026-08-12 20:48:02 INFO [Main] - This is an info message
2026-08-12 20:48:02 WARN [Main] - This is a warning message
2026-08-12 20:48:02 ERROR [Main] - This is an error message
```
