Deadlock

DEADLOCK

Write a Java program to create a deadlock scenario using multiple threads.

PROGRAM EDITOR

Java

Run

Save

```
1 import java.lang.management.ManagementFactory;
2 import java.lang.management.ThreadMXBean;
3
4 public class Main {
5
6     static class Worker implements Runnable {
7         private final Object first;
8         private final Object second;
9         private final String name;
10
11         Worker(Object first, Object second, String name) {
12             this.first = first;
13             this.second = second;
14             this.name = name;
15         }
16
17         @Override
18         public void run() {
19             synchronized (first) {
20                 System.out.println(name + " locked first resource.");
21
```

OUTPUT

```
Thread-2 locked first resource.  
Thread-1 locked first resource.  
Thread-2 attempting to lock second resource...  
Thread-1 attempting to lock second resource...  
  
[RESULT] DEADLOCK DETECTED!  
Thread ID 29 is part of a deadlock.  
Thread ID 30 is part of a deadlock.  
Program terminating normally.
```
