M-Thread

M-THREAD

Write a Java program to create multiple threads that perform some time-consuming task, such as calculating prime numbers or sorting an array, and compare their execution times.

PROGRAM EDITOR

Java

Run

Save

```
1 import java.util.ArrayList;
2 import java.util.List;
3
4 public class Main {
5
6     // Static nested class to perform the prime number calculation task
7     static class Task implements Runnable {
8         private final int start;
9         private final int end;
10        private int count = 0;
11
12        public Task(int start, int end) {
13            this.start = start;
14            this.end = end;
15        }
16
17        // Method to get the count of primes found in this task's range
18        public int getCount() {
19            return count;
20        }
21
```

OUTPUT

Total primes found: 9592

Total execution time with 4 threads: 15 ms

**INPUT**

Your INPUT goes here!
