Pool

POOL

Write a Java program to create a thread pool that can execute multiple threads concurrently.

PROGRAM EDITOR

Java

Run

Save

```
1 import java.util.concurrent.ExecutorService;
2 import java.util.concurrent.Executors;
3 import java.util.concurrent.TimeUnit;
4
5 public class Main {
6
7     // Static nested class inside Main
8     static class Worker implements Runnable {
9         private final int taskId;
10
11         Worker(int taskId) {
12             this.taskId = taskId;
13         }
14
15         @Override
16         public void run() {
17             String threadName = Thread.currentThread().getName();
18             System.out.println("Task " + taskId + " is running on " + threadName);
19
20             try {
21
```

OUTPUT

```
Task 2 is running on pool-1-thread-2
Task 3 is running on pool-1-thread-3
Task 1 is running on pool-1-thread-1
Task 2 completed on pool-1-thread-2
Task 1 completed on pool-1-thread-1
Task 3 completed on pool-1-thread-3
Task 5 is running on pool-1-thread-1
Task 4 is running on pool-1-thread-2
Task 6 is running on pool-1-thread-3
Task 6 completed on pool-1-thread-3
```
