Forecasting

FORECASTING

Write a Java program to implement a basic weather forecasting system using inheritance. Create a parent class called Forecast with attributes such as date and temperature. Then, create child classes such as SunnyForecast and RainyForecast that inherit from the Forecast class and have their own unique attributes and methods for predicting the weather.

PROGRAM EDITOR

Java

Run

Save

```
1 import java.util.Scanner;
2
3 public class Main {
4
5     static class Forecast {
6         String date;
7         double temperature;
8
9         Forecast(String date, double temperature) {
10             this.date = date;
11             this.temperature = temperature;
12         }
13
14         void displayBaseInfo() {
15             System.out.println("Date: " + date);
16             System.out.println("Temperature: " + temperature + " C");
17         }
18     }
19
20     static class SunnvForecast extends Forecast {
21
```

OUTPUT

Date: 27-08-2026

Temperature: 30.0 C

Weather: Sunny

Humidity: 60.0%

UV Index: 7

Prediction: Perfect day for outdoor activities!
